If L1 bid is of a domestic manufacturer, the said Bidder will be awarded full value of the order. 1. CNG STORAGE CASCADES DESCRIPTION

1.1. General

The intent of this tender is to outline minimum requirement for design, engineering, manufacturing, assembly, testing at works, supply, loading, unloading at BGL store / site in Hyderabad, Kakinada & Vijayawada geographical area as per Technical specification of tender.

This tender covers the supply of Stationary / mobile storage cascades for CNG Mother / Online / Daughter / Daughter booster stations of M/s Bhagyanagar gas Limited in Hyderabad, Kakinada & Vijayawada geographical area.

Sl. No.	CNG Cascade Category	Capacity	Quantity / Numbers
1.	Mobile / Stationary along with spares	3000 WL	20

In the Mother Stations, the compressed natural gas would be directly filled into stationary / mobile storage cascades mounted on trailers. Once the filling process into the cascade, mounted on a trailer, is completed, the filled CNG cascade mounted on trailer would be transported to a daughter station for off-loading. At the same time, an empty cascade mounted on the trailer would be parked beside the compressor for filling.

At online CNG stations, the compressed natural gas would be directly filled into stationary storage cascades and the cascades will work as floating volume of gas for filling into the buses / cars and for safety of CNG compressors such as to prevent the frequent on/off of the compressors.

At the daughter stations, the CNG cascade mounted on trailer will be connected to the unloading point. The unloading point will supply the inlet gas to the dispenser through compressor / cascade for filling the gas to vehicles.

Upon depletion of the CNG in the cascade mounted on the trailer, the trailer with mount CNG cascade would return back to the mother stations, for re-filling.

At the daughter booster stations, the CNG cascade mounted on the trailer will be connected to the booster compressor which will supply gas to the stationary cascade as well as to the dispenser. When the minimum pressure is arrived in the mobile cascade, the CNG storage trailer would return to the mother stations, for re-filling.

BHAGYANAGAR GAS LIMITED

Bid Document No.: MEC/23VX/01/51/D2/T03/SU/6535

2.3. CNG Specification

The CNG specification shall meet the IS-15958 / IS: 15320:2012 natural gas quality designation for use as a compressed fuel for vehicles.
The proposed specification of the CNG is as follows:

Gas Temperature	0°C to +40°C
Odorant -	(80% TBM+20%MES) Spot leak 12 ppm

2.4. Design Philosophy

Storage fulfils four functions.

ONE - It allows more vehicles to fill than the compressor could fill directly one after the other during peak times.

TWO - It allows the vehicle to fill at a faster rate than directly from the compressor.

THREE - It prevents the compressor from stopping and starting too often.

FOUR- The combined storage capacity is compartmentalised in three banks. Each bank is separated with check valve and direction of flow should be from low bank to high bank and also provided with pressure relief valve.

It is anticipated that the natural gas feed composition, flow rate and pressure will be fluctuating. Hence, Supplier should design the CNG storage facilities with optimum degree of flexibility, reliability, operability to accommodate the varying composition of feed, other unexpected contaminants, flow rate and pressure.

The CNG storage facilities should consist of standardised modules, which are assembled into a complete system. Each system should be designed in standardized modular frames. The modular approach allows the CNG Stationary storage and mobile storage facilities to be easily installed there by reducing installation time.

The design life of the CNG storage facilities should be 20 years.

2.5. Design Basis

The Supplier should prepare the design basis required to meet the demands mentioned in items 1.0, 2.0 & 3.0 and liaise with BGL / MECON to obtain necessary confirmation and approval.

2.6. Applicable Standards and Codes

The design, construction, manufacture, supply, testing and other general requirements of the Storage Cascades should be strictly in accordance with the Applicable Standards and Codes and should comply fully with relevant Indian / International standards, Gas Cylinder Rules 2016, Indian Explosives Act- 1884,
